## 950 STAIN REMOVER

### 1. PRODUCT DATA

**Date of Preparation:** March 1, 2015

**Product Name:** 950 Stain Remover

**Producer:** Diedrich Technologies, A Hohmann & Barnard Company, 310 Wayto Road, Schenectady, NY 12303

**Company Contact:** Ken Eglin

**Telephone:** 800-283-3888 **Fax:** 518-357-9636

**Email:** KenE@h-b.com **Web:** www.diedrichtechnologies.com

*This product is manufactured for Commercial/Industrial use. Not recommended for: Household use.*

### 2. PRODUCT DESCRIPTION

DIEDRICH 950 Stain Remover is a mild blend of acids, inhibitors and wetting agents for the removal of acid burn and vanadium (green or brown) stains from brick masonry. Diedrich 950 Stain Remover is an effective stain remover for brick siliconed either during manufacturing or after construction. If staining occurs in siliconed brick, Diedrich 940 Iron and Manganese Stain Remover would be the better choice. DIEDRICH 950 is effective for use on almost all masonry surfaces. Stain control is dependent on many variables in surfaces (polished stone) and job conditions. Corrective measures should be undertaken before cleaning.

### 3. PRECAUTIONS

**Personnel:** All workers must be protected with complete body coverage by rubber or polyethylene suits, boots, gloves, face shield and protective headgear. Avoid contact with eyes and skin. Any exposed skin should be covered with a liberal coating of vaseline. Use with adequate ventilation. If used in confined area the use of a respirator with the appropriate filter may be required. When product is to be used on an occupied building, close all windows and cover air intakes and exterior air-conditioning vents. Also shut down air handling equipment during application and for 30 minutes following. Avoid wind drift as it may injure passersby or damage vehicles.

**KEEP OUT OF THE REACH OF  
CHILDREN AND ANIMALS.**

**Interior Use:** All metal fixtures in interior should be removed or protected with plastic covers as they will be damaged by chemical fumes.

**Adjacent Areas:** Protect vegetation, electrical, metal and painted surfaces, anodized aluminum, asphalt roofing, cars and other adjacent items with proper precautions, plastic coverings, and by soaking with water.

### 4. TEST AREA

A test patch MUST be cleaned prior to full scale cleaning operations. The test patch is necessary to determine compatibility and required end results. Individual surface types must be tested. Inspection of the test areas should occur after the surface has thoroughly dried. The test patch should be available for inspection and approval, then remain as the standard for the project.

### 5. APPLICATION

Apply concentrated Diedrich 950 Stain Remover full strength to the surface being cleaned. Application should be to a dry surface with a synthetic bristle brush, or the with the DIEDRICH ACID EXPRESS PUMP, an acid-resistant airless low pressure sprayer which will prove to be the most effective method. Allow 10 to 15 minute dwell time, or until the stains have disappeared. If stains are not removed in 10 to 15 minutes, re-apply 950 Stain Remover and allow another 10 to 15 minute dwell time and rinse with fresh water. Application of rinse water should be with pressure washing equipment, fitted with a 15°, 25° or 40° fan type tip. Equipment providing 500 p.s.i. at 3 to 5 gallons per minute will give the best results.

If 950 Stain Remover is used on an interior surface, following the rinse the surface must be neutralized with a solution consisting of 1 part household ammonia and 5 parts water. Application can be with sponges or bristle scrub brushes.

### 6. COVERAGE

1 gallon at full strength will typically cover approximately 150 sq.ft. of surface. Area coverage can be increased with dilution.

### 7. AVAILABILITY

Diedrich products are available through a network of over 1400 distributors and 2100 contractors located throughout the United States, Canada, Mexico and Europe.
