"Specializing in Old & New Masonry Cleaning"

March 18, 2006

Dear Mr. Diedrich,

I just wanted to send you a message about your great products. I have been using them for over 5 years. As you know, my primary focus is cleaning new masonry. With over 300 different lines of brick, in seven basic categories to clean, we deal with a minimum of 26 different colors of mortar, in different strengths from M to S. All this represents just one brick manufacture.

Our goal is to have the completed masonry work look clean and uniform. I use a wide variety of chemicals to achieve that goal. Currently, I am using the following products: 202, 202V, and 202XX. I have tried using the companies that offer only one chemical for masonry cleaning and found that one chemical does not clean the same in various applications. Often we were left with dull looking brick, streaks in the mortar, and faded mortar joints. Certainly not the clean, uniform look I am trying for. I found that using the Dierdrich line of chemicals completes what my company is looking for. A quicker cleaner, with the end result being a great looking masonry building. Cleaning masonry is more than applying chemical and washing it off. We take pride in what we do, and it's clear that Dierdrich Chemicals does as well. That's why we will continue to use your products.

Thank you for offering such great products and continuing to strive to be better!. You continue to make my company look good!

Sincerely,

Tom Bennett
